CSI: **Commuter Stress Index** - the same as the TCI except it is for the peak direction of travel only.

PTI: **Planning Time Index** - (a reliability measure) ratio of the 95th percent peak period travel time to the free flow travel time. A value of 2.50 means that for a 30 minute trip in light traffic, 75 minutes should be planned.

TCI: **Texas Congestion Index** - ratio of the peak period average travel time to the free flow travel time. A value of 1.20 means that a 30 minute trip during light traffic would take 36 minutes during peak periods.

Total Annual Hours of Delay - represents average delay regardless of time of day

Peak Period Annual Hours of Delay - represents average delay during AM and PM peak periods
